

AllergywoRx Therapy Drops

AllergywoRx

Needle-free Testing & Treatment

AllergywoRx has developed a painless, needle-free approach to help manage and eliminate the causes of allergy symptoms. The program provides a complete, evidence-based solution that will help your patients start living an allergy-free life today. The sublingual immunotherapy vaccine provides a comprehensive and standardized compound that patients can safely administer daily, in the comfort of their own home.

Treat Allergies. Not Symptoms.

AllergywoRx Therapy Drops target the cause of allergies, not just the symptoms.

AllergywoRx sublingual immunotherapy was designed to modify and desensitize the immune system response to allergens over the long-term. The immunotherapy vaccine was created to safely build up the body's tolerance and sensitivity to the allergens responsible for patients' irritating symptoms.

Convenience. Compliance. Results.

Convenience drives compliance and compliance drives better outcomes.

Allergy therapies are often time-consuming and expensive, leading to poor therapy compliance and outcomes. AllergywoRx patients report nearly 80% therapy compliance when prescribed our unique sublingual therapy.

- Therapy is conveniently delivered to a patients home every 30 days
- Safe and easy to administer
- Only 5 total physician visits required by patients on an annual basis
- Economical: AllergywoRx therapies are roughly 1/3 of the cost of traditional allergy treatments

AllergywoRx sublingual drop therapy provides physicians an easily adhered to, long-term solution to significantly reduce, if not entirely eliminate, the pain, discomfort, and inconvenience of allergies.

80%

Compliance from patients
using sublingual drop therapy

VS

25-30%

Compliance from patients
using traditional
injection therapy

The World Health Organization Endorses Sublingual Therapy

The safety of SLIT (sublingual immunotherapy) over SCIT (subcutaneous immunotherapy) is well worth noting. In a comprehensive review of 104 articles on SLIT, there were 66 studies that provided some information on safety and tolerance, representing 4,378 patients who received nearly 1.2 million total doses. There were no fatalities or anaphylactic events reported using SLIT, and only 1.4 significant adverse events (SAE) per 100,000 SLIT doses. By comparison, according to the World Allergy Organization, there are an estimated 3.4 fatal and 22.8 near-fatal reactions caused by subcutaneous allergy shots every year.

About the Treatment

AllergywoRx Therapy Drops treatment is broken down into 4 phases. Every 30 days the patient will receive a new dropper that corresponds to the current phase.

The AllergywoRx Treatment Advantage

	AllergywoRx	Traditional Injection Therapy
Testing method	Non-invasive, painless surface skin test	Multiple painful injections to identify allergies
Administration	Self-administered drops under the tongue	Painful injections with hypodermic needle administered by medical professional
Convenience	Delivered to your home	Weekly trips to a medical facility
Cost	Approximately \$80/month	Approximately \$160/month
Treatment duration	1 – 2 years	5 – 7 years
Safety	No recorded instances of fatalities or near-fatal reactions	About 30 fatal or near-fatal reactions each year
Allergy coverage	Only test kit that covers the entire North American continent	Limited by region
